PEXELS A legend of the map is a table or a box on a map that shows the meaning of the symbols, shapes and colors used on the map. The legend of the map is sometimes called the key to the map. The legend of the map often has a ladder to help the distances of the map reader. The Legends map has historically been fixed elements on a printed map, but interactive digital maps often include the legends of the dynamic map. What's on a map legend? A legendary map shows colors, shapes and symbols to define a specific feature of the map. On a map of physical location, you might find areas of lakes, rivers and mountain ranges highlighted in the legend of the map for the type of map used. On a political map, you will find areas of influence related to a political party or individual political party. A legendary map will show colors and shapes for political influences, such as the parts, which are dominant in a particular state or region. Using a Legend Map Legends map you are often at the top or bottom of a map, with a color or symbol and a description for what these colors and symbols mean. Check your map area, then consult the map key for a clearer definition of the part of the map, revising. The purpose of the Legend map is also to show relationships between certain things. You could be in an important subway area and check the metro map, alternatively take a bus or car. The map and its legend can highlight not only the distance but also the complexity or ease of travel using a public subway. This value in the highlighting of space relations is a key resource for a legend of the printed map. Types of legendary maps There are many different types of maps, so the legend of the map varies according to Purpose of the map. On the physical maps of the geographical area, the forms and symbols probably show the location for cities and lakes, government buildings, county boundaries and motorways. On the most specialized maps, the map legend differs. For example, on a map of a large building or complex, complex, windows, ocites, stairs, fences, borders of ownership, and others will be highlighted in the legend of the map. . à types of maps printed since the dawn of man, cartographers and cartographers have created maps for travellers' guidance. the first maps were first made on clay tablets, and then on parchment paper and finally on printed maps and book atlases. à Today, there are many types of maps and their legends. you can find folding road maps and large road maps in the form of relegated Atlas. If you à 126; are a meteorologist, you will consult weather maps and weather maps. there are reference maps, political maps, demographic maps, gender maps and more. ' 160; the advantages of printed maps have lost the general oo over the last twenty years, due to the increase of satellite gps on mobile devices. having a direct voice in your car through your mobile device is an innovation that few of us could live without today. However, printed maps and their legends can often guide us in ways on our trips that small screens cannot. esempio For example, looking at a larger map can give travelers an idea of whether226; in the surrounding area, and not only on the direct route to the location. If you have a hiking map in your hand, you can measure the distance between your start and your reverse cycle by oando a printed map. à 160; MORE from reference. com Gregrose/Pixabay sometimes called legend, a map key is a table that explains what symbols mean on a map. This helps the person who reads the map to understand where to find some objects. For example, a map of a shopping mall can have symbols that reveal bathrooms, places to eat, lifts and guest areas. a map of a city can have symbols often represent parks or forests. The planes represent the airports and a red cross is a hospital. What is a map? A map is a view that represents a space. It can show a space as small as a room or as big as the whole world. It shows spatial relationships between its characteristics, and can show other information, such as climate, political boundaries, elevation, financial information and much more. Maps are made by cartographers. What is Cartography? Cartography is the practice of designing maps. Practice combines art, science and technique. Cartography, or mapping, has been in practice since ancient times. The oldest map ever discovered was found in a cave in Lascaux, France, in 2000's. It represents the stars of the night sky carved into the cave wall. Scientists believe they date back to more than sixteen, 500-year-old Magdalena. Other ancient cultures, including Greeks, Romans and Chinese, also used maps. Changes through Years 160; While most modern maps are printed on paper, digital maps are becoming more popular. People can access these maps on computers, phones, tablets and even in car GPS systems. The way maps are made has also changed over the years. The early cartographers used Earth geometry to create maps. Eventually, they started using aerial photography. Today, satellites are often used for cartography. While there are many different types of maps, most can be divided into two categories: general purpose or thematic. General usage maps are designed to indicate the exact location of things, such as road maps, atlases, building maps and wall maps. Thematic maps are a little more complicated. They provide general ideas on an area based on a theme Like the climate of a region, a state ~ " " ; ~ - ó " the economy of a city à é à é à é à é " À " voting habits. The thematic maps can use patches, points, islets or or interesting facts on Maps While the north is usually described at the top of the maps, which hasn226; 128? This has always been the case. Muslims once made maps with the south at the top when Mecca was south of their position. Many Europeans have positioned themselves to the east at the top. Some governments around the world censor maps. For example, Russia requires maps to show Crimea as part of Russia. Bologna Tolomeo, the first printed atlanta, sold for \$3.12 million in 2007. The Library of Congress has paid \$10 million for the Universal Cosmographic map that dates back to 1507. Itis believed that this was the first map to use the name America. MORE REFERENCE.
