**Triangle Proportionality Theorems Worksheet**

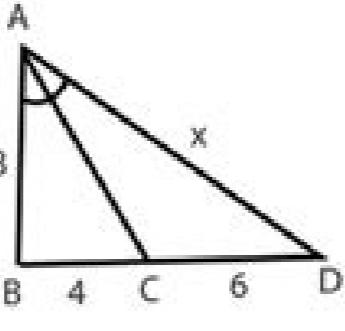

Using the proportionality theorems, find the value of 'x'

1

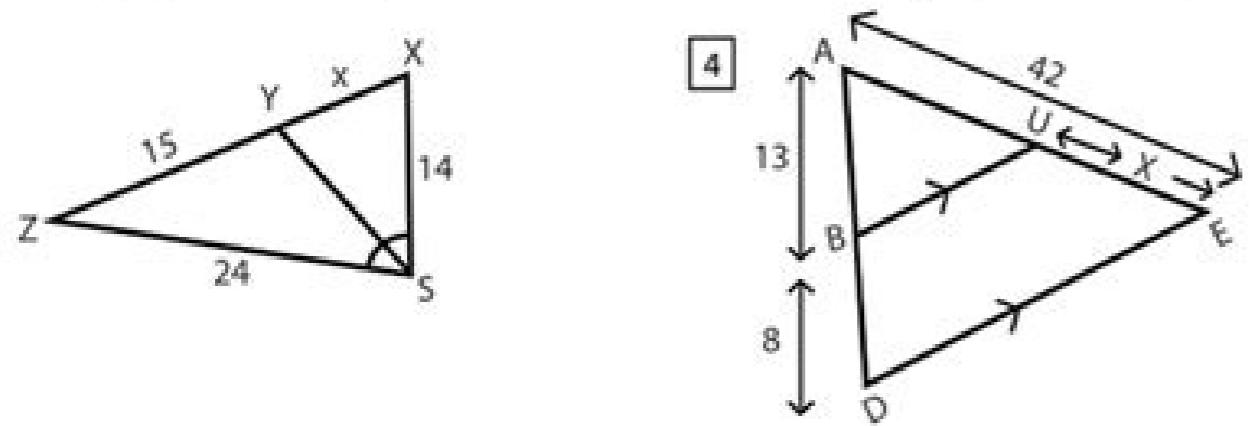

$$x = \underline{\hspace{2cm}}$$

2

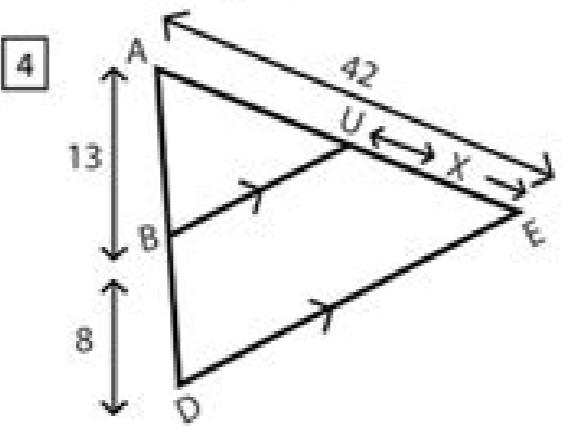

$$x = \underline{\hspace{2cm}}$$

3

$$x = \underline{\hspace{2cm}}$$

4

$$x = \underline{\hspace{2cm}}$$

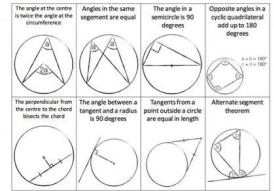

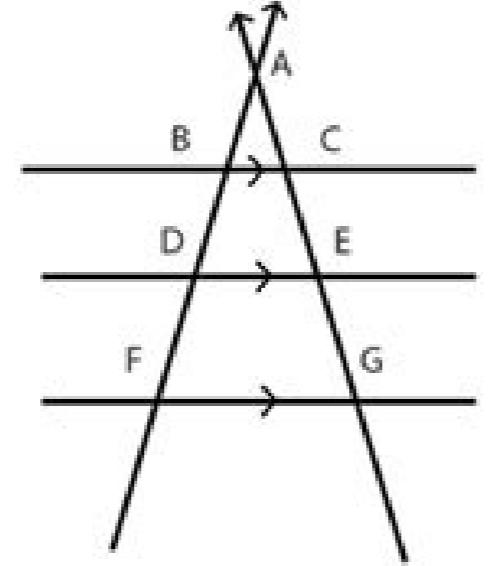

5 Use the figure to complete the proportion

1)  $\frac{AB}{BD} = \frac{CE}{\underline{\hspace{2cm}}}$

2)  $\frac{FD}{DB} = \frac{EC}{\underline{\hspace{2cm}}}$

3)  $\frac{BC}{DE} = \frac{AC}{\underline{\hspace{2cm}}}$

4)  $\frac{FG}{BC} = \frac{AG}{\underline{\hspace{2cm}}}$

**The Five Circles Theorem (Jacobs, Page 568)**

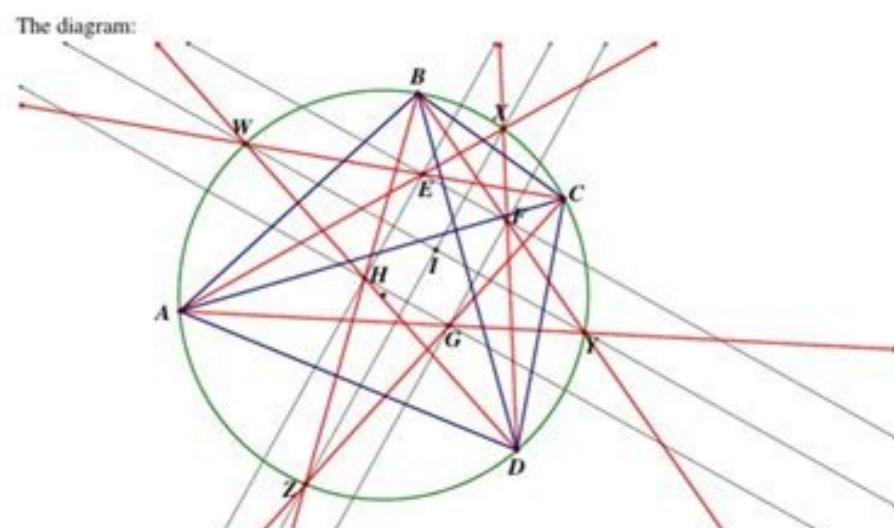

**Theorem:** Given a quadrilateral ABCD inscribed in a circle, draw diagonals AC and BD. Then construct the inscribed circles of  $\angle ABC$ ,  $\angle BCD$ ,  $\angle ACD$ , and  $\angle ABD$  and label their centers E, F, G, and H as in the diagram below.

Peter Renz, an editor of Jacobs' book, *Geometry: Seeing, Doing, Understanding Third Edition*, challenged me to produce a proof of this result that is more elementary than the one suggested by Jacobs in the *Teachers Guide*, which makes use of reflections. I found one which does not depend on transformational methods and depends only results commonly taught in a first course in geometry.

In what follows, I present the proof and also discuss how I used Geometer's Sketchpad to help discover the proof.

First, I used Sketchpad to construct the diagram, take measurements, and totally convince myself that the centers of the four inscribed circles indeed form the vertices of a rectangle. Next, to simplify the diagram, I left out the inscribed circles, because the result only refers to their centers, which are determined as the intersections of angle bisectors.

The diagram:

**Exam-style question 9**

The figure shows a circle with centre O. The points P, Q, R and S are on the circumference of the circle. Diagram NOT necessarily drawn to scale.

Diagram NOT necessarily drawn to scale.

- (a) Work out the value of  $x$ . You must give a reason.  
 $\angle POQ = 120^\circ$ ,  $\angle POB = 30^\circ$ , and  $\angle QOB = 40^\circ$

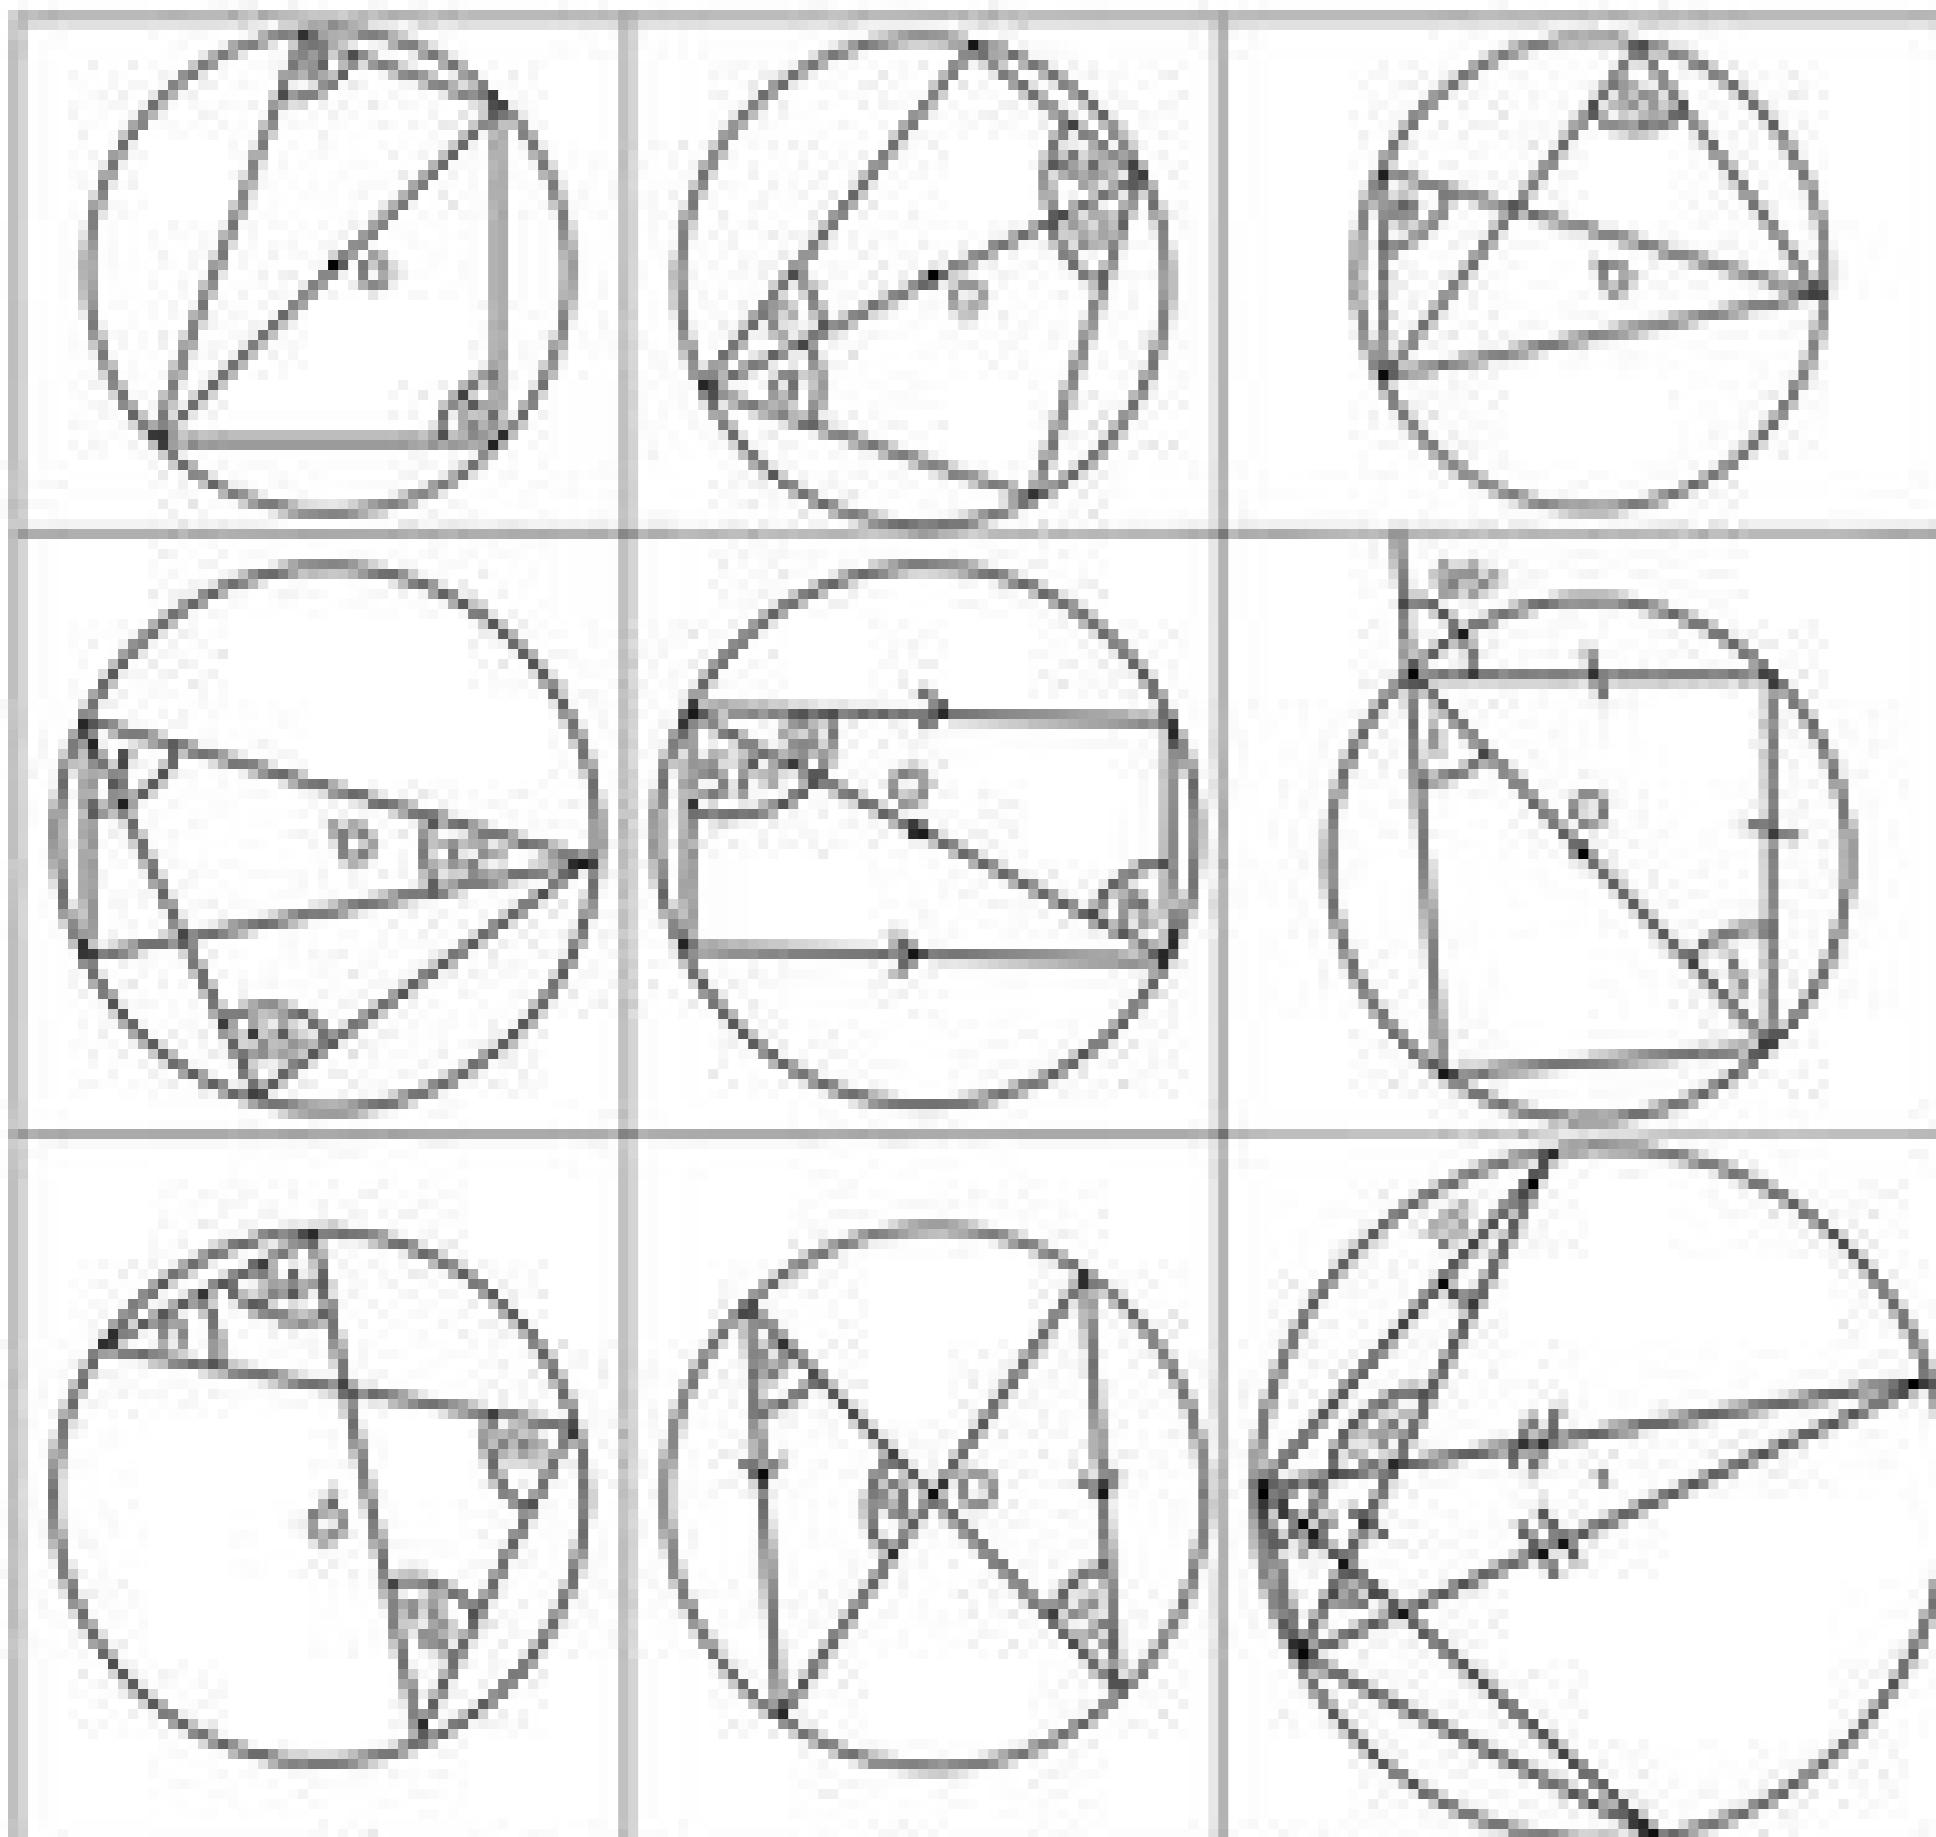

- (b) Work out the value of  $y$ . You must give a reason.  
 $\angle QRS = 100^\circ$

- (c) Work out the value of  $z$ . You must give a reason.  
 $\angle QRS = 100^\circ$

- (d) Work out the value of  $w$ . You must give a reason.  
 $\angle QRS = 100^\circ$

Diagram NOT necessarily drawn to scale.

**Defn Theorem:** Angles in the same segment are equal, and right angles subtended by diameter. Find the unknown angles and match them to the angle given below.

33°	58°	90°	31°
90°	93°	45°	34°
42°	29°	55°	88°
40°	57°	79°	118°
