Philadelphia, PA: Elsevier; 2020: cap 162. page 8how chemotherapy is GivenDepending from the type of cancer and where it is found, chemotherapeutic drugs can be given several ways, including: injections or in the pills or strokes under the muscles or strokes under the skininto an arteryinto a vein (intravenously, or iv) pills taken from faghici in the fluid around the spinal cord or brain when chemotherapy is given for a longer period, a catheter Thin can be inserted into a big vein near the heart. This is called a central line. The catheter is placed during a minor surgery. There are many types of catheters, including: a central line can stay in the body for a long period of time. It will have to be downloaded on a weekly monthly basis to prevent blood clots in the central line. Chemotherapeutic drugs can be administered at the same time or after another. Radiotherapy can be received first, later, or during chemotherapy. Chemotherapy is more often indicated in cycles. These cycles can last 1 day, several days or a few weeks or more. Usually there will be a rest period when no chemotherapy is given between each cycle. A rest period can last for days, weeks or months. This allows the body and blood counts to recover before the next dose.Often, chemotherapy is given in a special clinic or in the hospital. Some people are able to receive chemotherapy in their home. If domicile chemotherapy is given, domestic health nurses will help with medicine and IVS. The person who gains chemotherapy and their family members will receive special training. Different types of chemotherapy The different types of chemotherapy include: standard chemotherapy, which works by killing tumor cells and some normal cells. Treatment of normal cells and zero immunotherapy on specific objectives (molecules) in or on cancer cells. Unwanted chemotherapy effects in matters of chemotherapy because these medicines travel through the body to the whole body, chemotherapy is described as a treatment in bobinea. A result, chemotherapy could damage or kill some normal cells. These include bone marrow cells, hair follicles and cells in the coating of the mouth and the digestive tract. When this damage occurs, there may be side effects. Some people receiving chemotherapy: the side effects of chemotherapy depend on many things, including the type of cancer and which drugs are used. Every person reacts differently to these drugs. Some new chemotherapeutic drugs that best target chemulnal cells can cause less or different side effects. Your health care provider will explain what you can do at home to prevent or treat side effects. These measures include: Make sure with pets and other animals to avoid capturing sufficient calories and protein teasing infections à €
